

HOW TO KEEP BIG HOOKS AWAY

Wheel Thermo-Scanner Units spot overheated wheel bearings before it's too late—before you have to call the “big hook” to clear away a costly tangle.

Wheel Thermo-Scanner Units are modular designed, with a choice of

features to fit your needs. Readout is available on the spot or transmitted to any location you wish—over your lines or leased services. Readouts can be pen-charted or printed, with time register, car count, train direction, and automatic signal operation too.

AN IMPORTANT PLUS—When you specify GRS, you can get all your equipment from one source—not only the electronic control system, but also the signals, relays, carrier etc.—everything you need, including experienced railway signaling systems engineering.
