

# SAB Harmon completes the puzzle!

## A totally integrated inspection station.

Over the years we have recognized the need in the railroad industry for a single source for a complete and expandable inspection station. SAB Harmon integrates the various detectors and readouts that are needed depending on your specific requirements.

Our engineers have designed a system utilizing the highest levels of technology, dependability and performance. Detectors available are: overheated journals • loose wheels • high/wide loads • dragging equipment • flat wheels.

SAB Harmon has been committed to sound engineering and performance to the railroad industry for many years. Our

fully integrated inspection station is yet another example of how SAB Harmon is continually meeting the needs of the railroad industry with sound engineering and quality assuredness in performance.

Call today to get full details on SAB Harmon's completely integrated inspection station. It's yet another step in our continuing goal: Technology to keep our railroads moving ahead.
